

Vorro's BridgeGate Enterprise Integration Platform as a Service (EiPaaS)

BridgeGate EiPaaS helps health systems and IDNs securely integrate clinical and financial data across long-term, post-acute, and acute care settings. Designed for today's complex healthcare environment, our platform supports industry standards like HL7 and FHIR, enables real-time data sharing, and scales effortlessly without disrupting your existing infrastructure.

From reducing readmissions to enabling powerful analytics, BridgeGate gives you the tools to coordinate care, stay compliant, and unlock meaningful insights — all in one seamless solution.

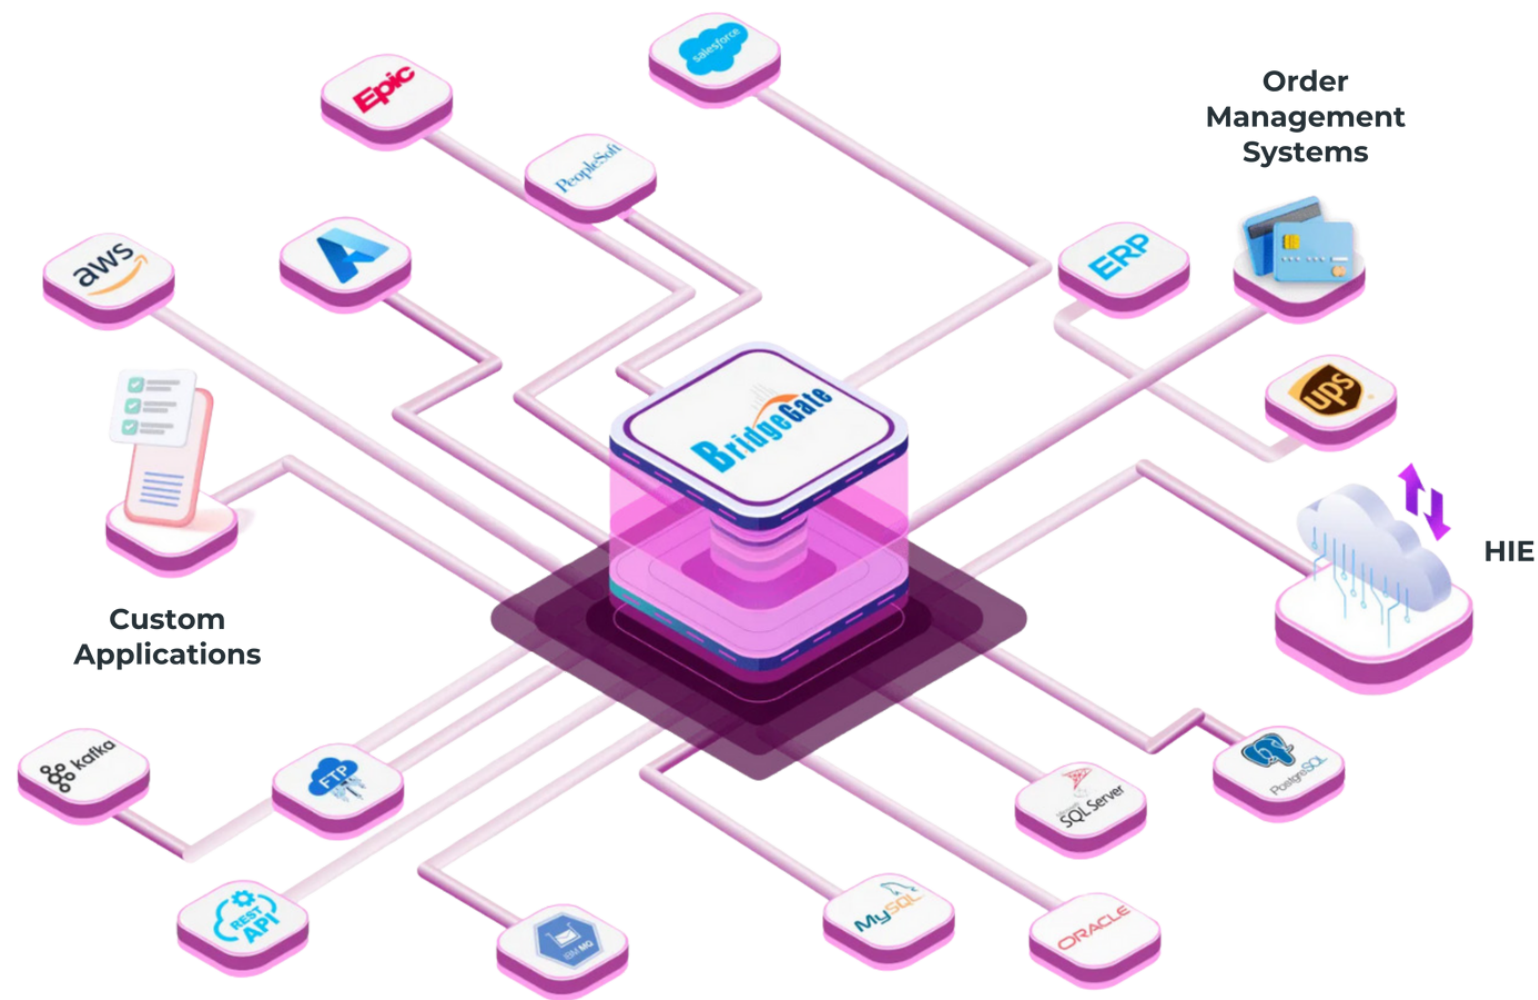

The Challenge

In today's collaborative environment, more Health Systems and Integrated Delivery Networks (IDNs) are required to move and share large volumes of clinical and financial data. They are looking for a robust systems integration platform to handle the secure data transfer.

They are seeking solutions that:

- Coordinate care and data integration with Long Term Care and Post-Acute Care (LTPAC) systems
- Enable “Big Data” and advanced analytics
- Provide for elevated systems integration
- Manage evolving healthcare standards like HL7 and FHIR

The Solution

Vorro's BridgeGate Enterprise Integration Platform As A Service (EiPaaS) solution enables IDNs and Health Information Exchanges (HIE) to:

- **Share patient clinical data** - from Nursing Homes and Home Health agencies.
- **Reduce 30-day re-hospitalization** - baseline, profile and report clinical data.
- **Enable medication reconciliation** - obtain realtime patient medication information from LTPAC providers.

It interoperates with any LTC EHR system, including:

PointClickCare • BlueStep • AOD Software • MDI Achieve • NTT DATA (Keane) • Optimus

Immediate Benefits

Meaningful use, interoperability issues, and healthcare standards requirements are pressing. Currently, patient information is locked in different silos of data, and a trusted, patient-centric view cannot be achieved without an information exchange infrastructure. Vorro's BridgeGate Enterprise Integration Platform As A Service (EiPaaS) redefines connectivity, going beyond basic 'interface engines' for seamless integration to enable acute care and primary care providers to coordinate care electronically with long-term care and post-acute care (LTPAC) providers. Vorro has long been a leader in long-term care interoperability with customers such as Keystone HIE and Care One.

Enable Big Data and Advanced Analytics

BridgeGate's any-to-any integration platform transforms and delivers massive sets of data with no programming and without impacting existing systems. When corporate data is available to an unlimited number of people within and external to your organization, it can be used to make informed and faster decisions, identify new opportunities to grow, and understand how well your organization is performing.

BridgeGate provides comprehensive, native access to more than 300 distinct databases and information sources - including relational, legacy, EHR, ERP, CRM, data staged in warehouses or data marts, and real-time data from operational systems - on any platform.

Provide for Elevated Systems Integration

Healthcare providers make mission-critical decisions every day but sometimes have to do so without all the information they need or would like to have. For many, their IT infrastructure doesn't support information sharing because they involve a wide range of systems and applications. BridgeGate's EiPaaS platform connects disparate systems quickly and can turn data into relevant, actionable information to shorten business cycles and increase responsiveness to changing conditions.

Benefits of BridgeGate EiPaaS

RAPID IMPLEMENTATION

Simple, easy to use. Integrate systems in days, not weeks.

COMPLEX, ANY-TO-ANY DATA INTEGRATED/TRANSFORMED

No matter the system, application, or format of data needed, BridgeGate Health™ handles the transaction and converts the data in the format and way you need it.

SCALABLE AND EXTENSIBLE TO GROW WITH YOU

There is no need to "rip out and replace" with BridgeGate; our solutions grow with your organization, protecting your existing investments and preparing you for the future.

SECURITY

Feel confident in your ability to store and share patient health information safely.

VISIBILITY

Auditable chain-of-custody of data provides one view of meaningful information with proactive alerts, notifications, and error resolution.

LOW-COST SOLUTION FOR MORE INTEGRATION

Better information while spending less on IT resources, development, and maintenance.

Robust, Scalable and Proven

The BridgeGate EiPaaS platform orchestrates millions of real-time data messages daily for 250 health systems, encompassing over 1,000 facilities. BridgeGate EiPaaS interoperates with these and 50 other EHR systems:

Siemens • Healthland • eClinicalWorks • NextGen • HMS
Cerner • Meditech • GE Centricity • CPSI • McKesson •
Epic • Allscript

Manage Evolving Healthcare Standards

1

Readiness Assessment

Conducting a gap analysis to identify the systems and applications you have in place currently vs. what the new standards require, and outlining a step-by-step readiness process.

2

Business Impact Assessment

Preparing systems and application inventory, and then a risk assessment detailing the processes and personnel likely to be impacted by the new standards, while recommending courses of action and solution options.

3

Implementation

Implementing the BridgeGate EiPass integration solution that connects the systems required to adapt to new standards or interoperability mandates, and helps you re-engineer workflows and business processes, test all systems, and work on change management initiatives. Training and support are also included.

To prepare for changing systems and evolving standards, you need a partner that provides you with the enterprise integration platform and expertise to help you connect your systems and redesign your business processes. BridgeGate can take you through the steps necessary to feel confident you can meet all standards and requirements.

True interoperability and standard compliance achieved – BridgeGate EiPaaS supports healthcare standards such as **HL7, FHIR, NCPDP, ANSI X-12 EDI, IHE, CCR, CDA/CCD, CCDA, NCPDP, DICOM, RLS**, and many others.
